Re: Asbestos Dump Sites Satellite Site
White Bridge Road Satellite Site

Dear Skip:

I have recently received a memo from the on-scene coordinator for the White Bridge Road property occupied by your clients, David and Joyce Major. He indicates that on or about February 7, 1991, EPA representatives drove by the White Bridge Road Site and found that asbestos warning signs had been removed and that the fence restricting access to the riding ring area had been damaged. Additionally, "people have been accessing the restricted area by circumventing the fence". Photographs of the situation were taken. Photocopies are enclosed for your reference.

Would you please contact me immediately to advise me of the current situation. Do the Majors have knowledge of who has removed the asbestos warning signs and altered the fence? Are they aware that people, presumably riders and/or borders, have been using the restricted area? EPA will be taking steps in the near future to remedy the damage done to the signs and fence. We will, of course, be vigilant in the future to ensure that further damage does not occur.

Please instruct your clients to contact EPA immediately either through you or to call Mike Neill, on-scene coordinator, directly, if there is any further vandalism at the site or use of the restricted riding area.

Sincerely,

Carolyn Fiske Wright,
Assistant Regional Counsel
New Jersey Superfund Branch
